 Director, Division of Disease Control

2016 Philadelphia West Nile Virus Activity Report
September 1, 2016

So far this season, only one neuroinvasive West Nile Virus (WNV) case has occurred in Philadelphia. During Morbidity Week 33, the Philadelphia Department of Public Health (PDPH) continued to identify mosquito pools infected with WNV throughout the City. The cumulative WNV mosquito pool positivity rate in 2016 remains similar to 2015 (15% vs. 16%). WNV activity in mosquitoes and increased risk for human infection will continue for the next several weeks through September.

From May through October, PDPH in collaboration with the PA Department of Environmental Protection conducts mosquito management activities throughout Philadelphia, which entails surveillance and identification of mosquito pools, testing pools for WNV, and control activities (eliminating breeding sites, larviciding catch basins, ground spraying, etc.). Targeted treatments to control adult mosquito populations will be applied to areas with WNV positive pools as needed. Since June 2016, 23 locations across Philadelphia with WNV positive mosquito pools or high numbers of nuisance mosquitoes were treated to control adult mosquito populations.

**West Nile Virus Mosquito and Human Case Surveillance, Philadelphia PA,
 Morbidity Week 33 and Cumulative 2016 Season Update**

^aThirty-seven sites tested positive 1–6 times.

	Week 33 (8/14–8/20)	2016 Season (5/1–8/20)
Mosquito Pools Tested	109	685 ^a
WNV Positive Pools	16	53
Humans Tested ^b	1	13
Human WNV Cases	0	1
Neuroinvasive WNV	0	1
WNV Fever	0	0

^a685 mosquito pools at 188 different mosquito trapping sites

^bTesting among case reports received by PDPH only

State and National WNV Activity Reports

- [Pennsylvania Department of Health](#)
- [Centers for Disease Control and Prevention](#)

WNV Testing and Reporting Requirements for Human Surveillance in Philadelphia:

- Collect CSF (from symptom onset–day 8) and serum (day 8–14) from patients with unexplained encephalitis or meningitis for WNV IgM testing.
- Report suspected and confirmed WNV infections (neuroinvasive or non-neuroinvasive illness) and encephalitis cases to PDPH by telephone at 215-685-6742 (or 215-686-4514 after hours). Reports also may be faxed to 215-238-6947.

Advise your patients to:

- Use repellent with DEET (≥20% to also prevent tick bites), Picaridin, or oil of lemon eucalyptus when outdoors.
- Regularly check and remove standing water outside their home (e.g., unused pools, tires).
- Keep well-fitted screens on windows and doors.
- Report mosquito problems and dead bird sightings to the PDPH Vector Control Program’s Mosquito Complaint hotline at 215-685-9000.
