

PHILLY FLU FINDINGS

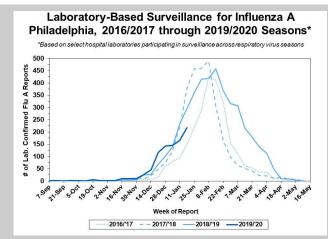

Philadelphia Department of Public Health Seasonal Influenza Surveillance Report MMWR Week 4 Jan 19, 2020 —Jan 25, 2020

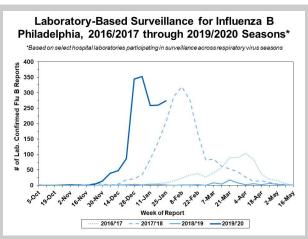

Philadelphia Influenza Activity

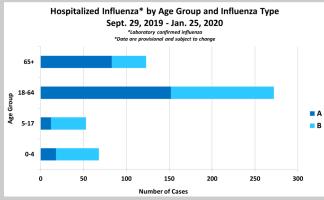

Please note these data are provisional and subject to change.

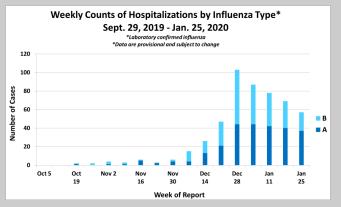

Febrile/flu-like illnesses increased in children and adolescents during week 4. 492 specimens were reported from our sentinel hospital laboratory surveillance for influenza A and B during the same time period among the 6 participating laboratories, a majority of which (274) was influenza B. 57 reports of severe influenza (Philadelphia resident, positive by rapid test, PCR or culture, and hospitalized for ≥ 24 hrs) have been reported this week (season-to-date = 516), with 37 (65%) positive for influenza A. 3 influenza outbreaks (≥ 1 case of laboratory confirmed influenza reported in a long term care facility) were reported during Week 4. 7 influenza-associated deaths have been reported season-to-date.

Pennsylvania

The Pennsylvania Department of Health reports widespread activity, with a slight decrease in positive laboratory tests but a slight increase in outpatient ILI visits. Of the 48,510 season-to -date, lab-confirmed cases of influenza (positive by rapid test, PCR, or culture), 32,598 have been identified as influenza B. 1,089 flu-associated hospitalizations and 33 flu-associated deaths have been reported. For more information, please visit: https://www.health.pa.gov/topics/ disease/Flu/Pages/2019-20-Flu.aspx

United States

Flu activity has increased over the past two weeks. The percentage of laboratory positive specimen from clinical labs has increased and the number of jurisdictions experiencing high ILI activity increased from 37 last week to 44 this week. Pneumonia and influenza mortality remain low. This week, from 1,129 positive specimens tested at public health laboratories, 629 (55.7%) were influenza A, with 96.1% A(H1N1)pdm09 viruses.
