

## PHILLY FLU FINDINGS

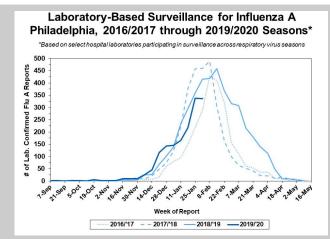

Philadelphia Department of Public Health Seasonal Influenza Surveillance Report MMWR Week 6: Feb 2, 2020 —Feb 8, 2020

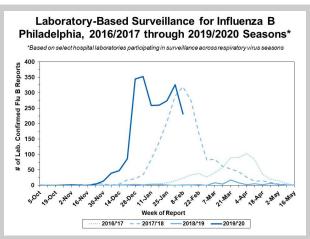

## Philadelphia Influenza Activity

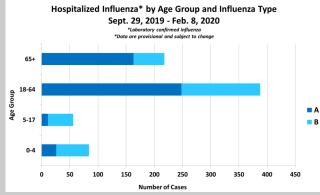

Please note these data are provisional and subject to change.

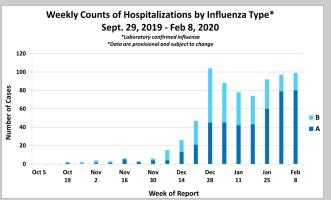

Febrile/flu-like illnesses decreased among all age groups during week 6. 567 specimens were reported from our sentinel hospital laboratory surveillance for influenza A and B during the same time period among the 6 participating laboratories, a majority of which (336) was influenza A. 99 reports of severe influenza (Philadelphia resident, positive by rapid test, PCR or culture, and hospitalized for ≥ 24 hrs) have been reported this week (season-to-date = 746), with 80 (81%) positive for influenza A. 2 influenza outbreaks (≥ 1 case of laboratory confirmed influenza reported in a long term care facility) were reported during Week 6. 10 influenza-associated deaths have been reported season-to-date.

## **Pennsylvania**

The Pennsylvania Department of Health continues to report widespread activity, with influenza A(H1N1)pdm09 being the most detected flu virus. Of the 72,260 season-to-date, lab-confirmed cases of influenza (positive by rapid test, PCR, or culture), 25,542 have been identified as influenza A. 1,632 flu-associated hospitalizations and 47 flu-associated deaths have been reported. 0 deaths have been reported for 0-18 year olds. For more information, please visit: https://www.health.pa.gov/topics/ disease/Flu/Pages/2019-20-Flu.aspx

## **United States**

Flu activity has increased over the past four weeks. Hospitalization rates among children and young adults are higher at this time than in recent seasons. This week, from 1,258 positive specimens tested at clinical laboratories, 833 (66.2%) were positive for influenza A. 92 influenza-associated deaths in children have been reported this season.
