PHILLY FLU FINDINGS

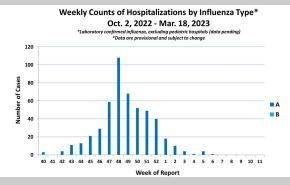

Philadelphia Department of Public Health Seasonal Influenza Surveillance Report MMWR Week 11: March 12, 2023—March 18, 2023

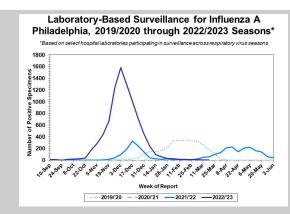

Philadelphia Influenza Activity

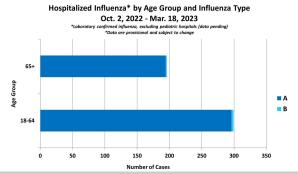

Please note these data are provisional and subject to change.

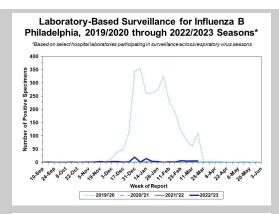

Please note data for one hospital is pending and will be updated once received. For week 11, influenza-like illnesses at emergency departments increased slightly for all age groups. Laboratory detections of influenza and activity overall both remain low. Since October 2, 2022, there have been 495 reports of severe influenza at non-pediatric hospitals (Philadelphia resident, positive by rapid test, PCR or culture, and hospitalized for ≥ 24 hrs). Data from pediatric hospitals is pending, and will be updated once received. Twenty six influenza outbreaks have been reported (≥ 1 case of laboratory confirmed flu reported in a long term care facility) so far this season. Twelve deaths have been reported to date.

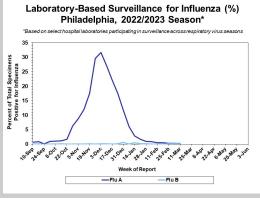

Pennsylvania

As of March 18, 2023, the Pennsylvania Department of Health (PDOH) has reported that flu activity has declined and activity is low overall. Emergency department visits for flu-like symptoms are moderate as well. Influenza A (H3N2) viruses have been identified as the predominant type detected and overall there have been a total of 183,004 laboratory confirmed cases of influenza (positive by rapid test, PCR, or culture). There have been 144 influenza associated deaths this season. For more information, please visit: https://www.health.pa.gov/topics/disease/Flu/Pages/2022-23-Flu.aspx

United States

As of March 18, 2023, the CDC reports that influenza activity is low nationwide. Flu related hospital admissions have remained stable compared to the previous week and 7 of 10 HHS regions were below their outpatient respiratory illness baselines. Clinical laboratories have reported 535 influenza detections out of 64,650 specimens tested (0.8%), 98.7% of which tested positive for influenza A. Of influenza A viruses that have been subtyped in week 11, 37.0% have been H3N2 and 63.0% have been H1N1. One hundred thirty four pediatric deaths have been recorded so far this season. In week 11, 3 jurisdictions experienced moderate flu activity, while 3 had high activity. For more information, please visit: https://www.cdc.gov/flu/weekly/index.htm
