

# PHILLY FLU FINDINGS

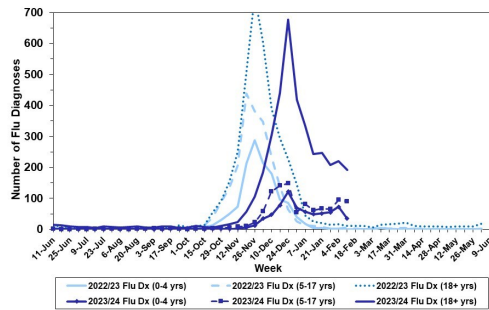

Philadelphia Department of Public Health  
Seasonal Influenza Surveillance Report  
MMWR Week 7: February 11, 2024—February 17, 2024

## Philadelphia Influenza Activity

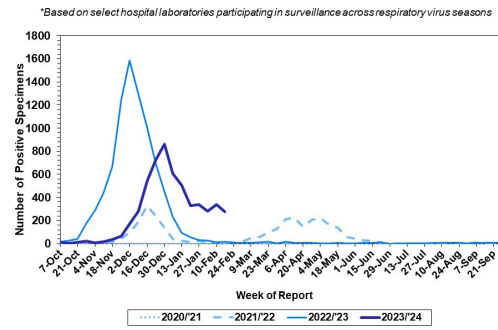

Please note these data are provisional and subject to change.

Influenza-like illness activity at local emergency departments declined for all ages during week 7. Positive detections of influenza A at select local hospital laboratories have fluctuated over the past few weeks, while influenza B continues to increase. A preliminary count of 75 severe influenza cases (Philadelphia resident, positive by rapid test, PCR or culture, and hospitalized for  $\geq 24$  hrs) have been reported and confirmed so far this season, the majority of which have been influenza A. Several other influenza reports are pending confirmation of hospitalization. Twenty one influenza outbreaks have been reported and confirmed ( $\geq 1$  case of laboratory confirmed flu reported in a long-term care facility) this season.

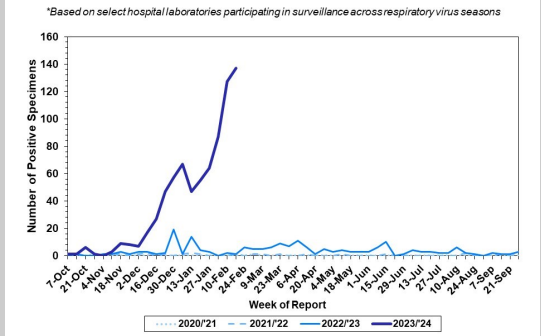

### Influenza Diagnoses at Philadelphia Emergency Departments, Current Season Compared with Previous Season

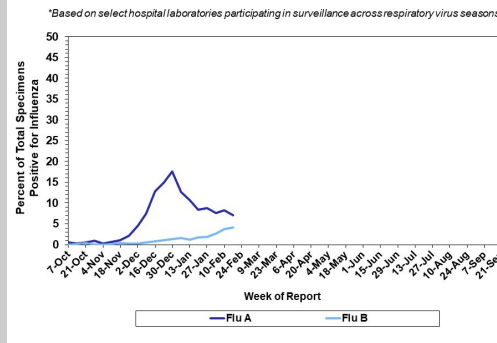

### Laboratory-Based Surveillance for Influenza A Philadelphia, 2020/2021 through 2023/2024 Seasons\*

### Laboratory-Based Surveillance for Influenza B Philadelphia, 2020/2021 through 2023/2024 Seasons\*

### Laboratory-Based Surveillance for Influenza (%) Philadelphia, 2023/2024 Season\*

## Pennsylvania

As of February 17, 2024, the Pennsylvania Department of Health (PADOH) reported that influenza A and B activity increased. Emergency department visits resulting in an influenza diagnosis also increased among most age groups and areas. There have been 112,256 influenza positive laboratory tests reported so far this season. Influenza A/H1N1 remains the most prevalent subtype identified among those tested at the PA Bureau of Laboratories. Two hundred and seventy deaths have been reported to date this season. For more information, please visit: <https://www.health.pa.gov/topics/disease/Flu/Pages/2023-24-Flu.aspx>

## United States

As of February 17, 2024, the CDC reports that seasonal influenza activity remains high among most parts of the country and that some areas experienced increases compared to the previous week. In week 7, clinical laboratories reported 13,304 specimens (14.8%) of 89,939 specimens tested positive for influenza, 60.7% of which have been influenza A. Of influenza A specimens subtyped at public health labs, 51.3% have been subtyped as H1N1 and 48.7% as H3N2. Influenza hospitalizations were stable compared to the previous few weeks but have been trending downwards since week 1. All 10 HHS regions are still exceeding their outpatient respiratory illness baselines. Eleven jurisdictions reported moderate flu activity while 27 jurisdictions experienced high levels of flu activity. For more information, please visit: <https://www.cdc.gov/flu/weekly/index.htm>

**All institutional outbreaks and hospitalized and fatal cases of influenza are to be reported to PDPH.**
