

2019 Philadelphia West Nile Virus Activity Report

September 13, 2019

The first human West Nile Virus (WNV) case was identified during Morbidity Week 37. One adult resident developed neuroinvasive disease and was subsequently hospitalized. Positive mosquito pools continue to be identified across the City. The WNV mosquito pool positivity for 2019 is higher than the historic median rate (11.3% vs. 4.2%), and lower than rates observed in 2010 and 2018 (22-40%), peak WNV activity seasons in Philadelphia. Increased risk for human infection will continue in Philadelphia until the first hard frost occurs.

From May through October, the Philadelphia Department of Public Health (PDPH) in collaboration with the PA Department of Environmental Protection conducts mosquito management activities throughout Philadelphia, which entails surveillance and identification of mosquito pools, testing pools for WNV, and control activities (eliminating breeding sites, larviciding catch basins, ground spraying, etc.). Since May 2019, 13 locations in Philadelphia were treated to control adult mosquito populations.

West Nile Virus Mosquito and Human Case Surveillance, Philadelphia PA, Morbidity Week 36 and Cumulative 2019 Season Update

*20 locations had 2-13 mosquito pools test positive.

	Week 36 (9/1–9/7)	2019 Season (5/1–9/7)
Mosquito Pools Tested ^a	31	913
WNV Positive Pools	7	103
Humans Tested ^b	0	11
Human WNV Cases	1	0

^a913 mosquito pools at 142 different mosquito trapping sites

^bTesting among case reports received by PDPH only

State and National WNV Activity Reports

- [Pennsylvania Department of Health](#)
- [Centers for Disease Control and Prevention](#)

Advise your patients to:

- Use repellent with DEET (≥20% to also prevent tick bites), Picaridin, or oil of lemon eucalyptus when outdoors.
- Regularly check and remove standing water outside their home (e.g., unused pools, tires).
- Keep well-fitted screens on windows and doors.
- Report mosquito problems and dead bird sightings to the PDPH Vector Control Program's Mosquito Complaint hotline at 215-685-9000.

WNV Testing and Reporting Requirements for Human Surveillance in Philadelphia:

- Collect CSF (from symptom onset–day 8) and serum (day 8–14) from patients with unexplained encephalitis or meningitis for WNV IgM testing.
- Report suspected and confirmed WNV infections (neuroinvasive or non-neuroinvasive illness) and encephalitis cases to PDPH by telephone at 215-685-6742 (or 215-686-4514 after hours).
