

MPOX

HOW YOU CAN STAY PROTECTED

Mpox (formerly known as monkeypox) is a viral disease. The virus is mostly spread through skin-to-skin contact.

Should I get vaccinated?

Vaccination is an important tool in preventing the spread of mpox. The JYNNEOS vaccine protects against severe illness, hospitalization, and death.

Anyone in Philadelphia who is likely to be exposed to mpox can get the vaccine.

Are you traveling to an area with an outbreak?

Outbreaks of clade I mpox continue in Central and Eastern Africa. Other travel-associated cases have been reported in other parts of Africa, as well as Asia, Europe, the Middle East, North and South America, and Australia. Please review the travel guidance if you have upcoming travel.

[cdc.gov/monkeypox/situation-summary](https://www.cdc.gov/monkeypox/situation-summary)

TWO doses of the vaccine provide the best protection.
